network equipment building system

FIG. 1

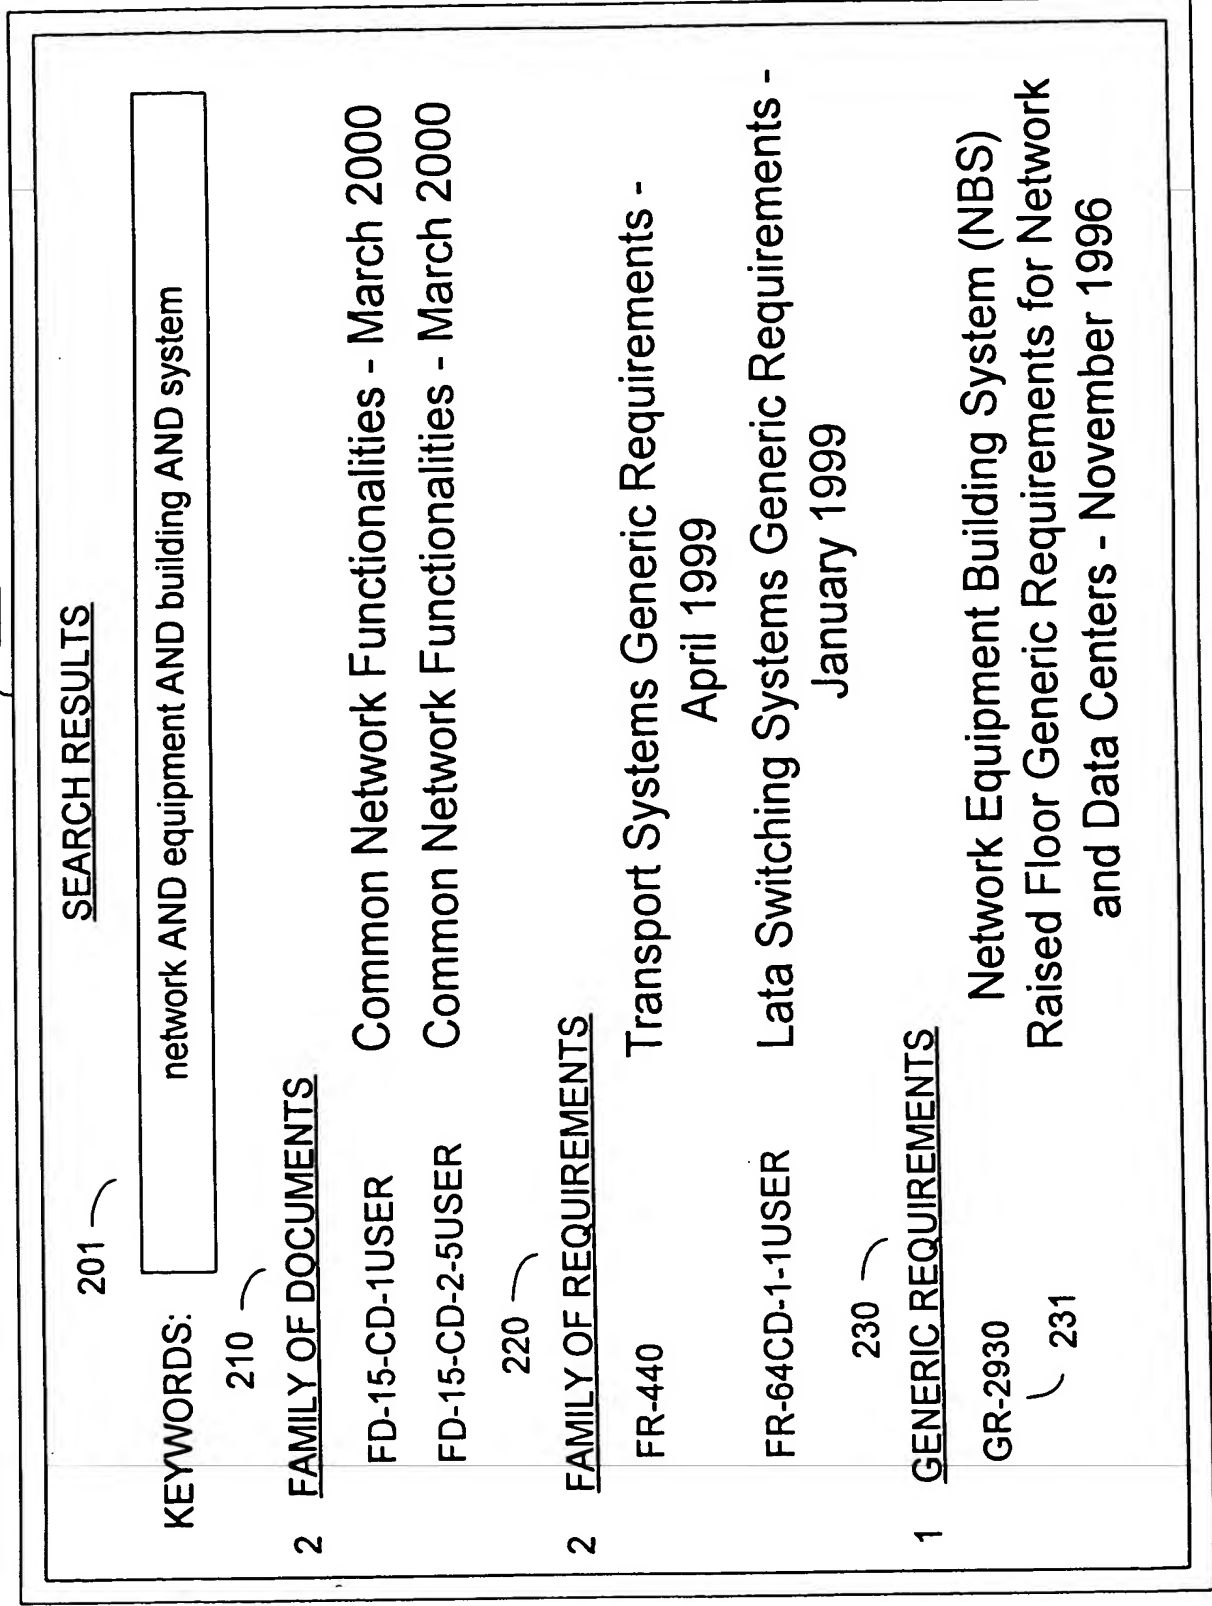

FIG. 2

301

DOCUMENT NUMBER: GR-2930

ABSTRACT: This document is a module of NEBSFR, FR-2063. This document presents the Telcordia view of generic engineering requirements for raised floors to be used in conjunction with GR-63, "Network Equipment Building System (NEBS) Requirements: Physical Protection," for the support of network and data center equipment. Requirements include physical strength, fire resistance, grounding and bonding, and test methods. These requirements are intended to help assure conformance with Telcordia NEBS requirements to provide the physical protection to equipment by the raised floor.
